An outsider's perspective can bring unexpected value to your organization

Opportunities are made, not found

A Complete Stack of Cybersecurity Courses

Skills & expertise to help you increase your knowledge in the field of emerging security technologies

Opportunities are made,
not found

Security is a Shared Responsibility

All of our courses are designed on the basis that you have nothing to lose and everything to gain.

Organizations must understand the total value of investing into their resources rather paying heavy penalties against the new data protection laws

Act today to prevent a breach tomorrow

Overview

Security is part of a proactive mindset. That doesn't mean you should live in a constant state of fear. Being security minded means you take precautions and follow industry standard best practices that will reduce your risk of becoming a victim of fraud or other criminal activity. And if you do that for your own sake, by extension you'll enhance the security posture of your organization.

TLC offerings is based on 13 security courses. Customers can select any of these courses for their employees and we will impart these courses at their given date and time subject to a minimum of seven paid registrations.

About this program

TLC is pleased to announce a stack of nine unique vendor neutral face-to-face and online technology workshops as a part of their education and training services program. All of these courses can also be delivered in a private format for a particular customer online or at on-site premises as a part of our "Client Onsite Education and Training Services Program".

These workshops will be delivered by an experienced trainers with 30+ years of career experience imparting education and training services both locally and internationally for a diversity of a customers. In terms of career, our trainer have served international enterprise technology vendors including IBM, Fujitsu, and ICL and a national organization Si3.

Our trainer holds various industry professional certifications in the space of Enterprise Architecture, Enterprise Servers & Storage technologies, ITIL, Information Security, Cloud Architecture, Blockchain technology, Virtualization, Green IT, Business Resilience and a co-author of 10 IBM  Redbooks in the area of IBM AIX operating system and Power Server technologies.

Our workshops are vendor neutral which makes the attendee completely familiar with new technologies surrounding emerging and complex business issues targeting security. The strategy is to build customer resources with mandatory skills so they can understand, design and develop their security solutions and work shoulder-to-shoulder with their vendors enabling 100% project success rate.
